

Participant Worksheet: **Medicine Hideouts**

Directions: You are a Junior Pharmacist helping teach families how to store medicine safely at home.

1. Cut out the images within the *Junior Pharmacist Resource*.
2. Classify each image as a “safe” or an “unsafe” place to store medicine, then glue or tape the image in the correct box.
3. Reflect on the similarities among images within the same box, as well as the differences between the two groups. Write your thoughts in the *Junior Pharmacist Report*.
4. In the same report, write a note to families explaining the key features of a safe place to store medicine and why families should keep medicine in safe places.

Safe Storage Places

Unsafe Storage Places

Participant Worksheet: **Medicine Hideouts, continued**

Junior Pharmacist Report

Date: _____

Cares-A-Lot Corner Pharmacy
123 Generation Rx Lane

Similarities & Differences

Note to Families about Safe Medicine Storage:

Pharmacist Signature(s): _____

Interested in learning more about **pharmacy**?

Some medicines need special storage, and pharmacists add helpful stickers to share this information and teach patients safe storage places. Here are two examples – why do you think some medicines have special storage conditions?

Hint: how may temperature or light change the active ingredients in a medication?
